

Integrated bench seat, postformed

Bench seat out of 10 mm HPL Compact with rounded front edges. In this version, the bench is emphasised more and appears to be more compact. The supporting structure corresponds to the standard version.

Additional shoe rack out of anodised aluminium rods between the cantilevers.

Integrated bench seat, standard

Bench seat out of 10 mm HPL Compact on cantilevers, fixed to the locker's body. The locker fronts are equipped with bench plinths under the bench so that the full height is maintained on the lockers' inside. Colours can be freely selected in line with the current colour chart.

**Upper shelf
Clothes rail with hooks**

Rotating triple hook

Sloping top, side cladding

**Shoe compartment with
foldable cover**

Theft-proof coat hanger

**User-friendly hotel coat
hanger**

Changing Areas Locking systems

The decision for a certain locking system for the lockers does not only determine the extent of security and comfort you provide for your customers. It also has an effect on the processes within your complex. Handing out keys is a time consuming job and requires functional storage systems, it does, however, enable personal contact and control. Coin-return systems entail less work at the reception and result in more freedom with regard to choosing a locker, given that each visitor has the required coin at hand. Electronic locks can be combined with almost all billing and access control systems. They may, however, mean more work with regard setting up the network.

We shall be happy to assist you in deciding which system is the right one for you. Our product range includes a great variety of products from renowned manufacturers. Should you not find what you require among our products or if you have already decided on another lock, this is no problem, as basically the following applies: Geschwender lockers can be equipped with all locking systems available on the market.

Locked Up?

Hasp lock

The most simple type of lock. Hasp locks which are the customer's own as well as those which can be rented at the reception can be used.

Heavy duty cylinder locks

The most common type. High quality security lock cylinder with a six-pin tumbler and a master key as a locking system with up to 1,200 various lockings. Lockers are allocated by means of handing out the key at the reception.

Coin return locks

Can be locked after inserting a coin or a token. Can be set to all coins and currencies at the factory. Money is returned after opening the locker. Lockers can be freely selected as the keys remain in the lock until they are used.

Coin retain locks

These function in the same way as the coin return locks. The coin is, however, not returned to the user. In particular appropriate for storage liable to costs (e.g. Skidepot).

Card locks

Possibility of locking after inserting a card which is obtained at a machine or at the reception.

Pin code locks

The door is closed and opened through entering a number combination of your own choice. After usage, it is automatically reset to enter mode. Additional possibility of opening it with the master key. No separate key required.

Transponder locks (battery operated)

Stand alone system. The door is opened and closed by means of a transponder chip which can be integrated in wrist bands, membership cards or something similar. Locks require battery packs.

Transponder locks (operated within a network)

The door is opened and closed by means of a transponder chip just as above, but all locks are linked within a network. All relevant data (status of the lock, attempts to break it open, etc.) are reported to the main computer/server or to the reception. This is a fully powered system.

Security mechanism against forcing open

Even top quality locks resist manipulation attempts only to a certain degree. In order to increase the safety of our lockers, all doors are equipped with a double clasp security mechanism against force being applied. Thanks to this mechanism, it is substantially more difficult to force the latch out of its locking position.

Accessories

Wrist bands, key rings, door number plates...
...complementary standard components in numerous shapes and colours, but also individual solutions, in particular in the case of door number plates, which reflect high standards and elaborateness right down to the smallest detail through special shapes, printed logos or unusual materials.
