

Babies bathtubs

Large sized basins such as babies bathtubs, laboratory basins or sinks can be integrated without gaps into the working surfaces finished in solid surface material and thus meet highest demands regarding hygiene and are easy to clean.

Wash room equipment
Shower panels

We exclude the risk...

...the risk of leaking water pipes plastered into walls and resulting structural damage. With our shower panels, we offer the option of installing the plumbing on top of, rather than within, the structural walls of the building, ideally with a lead-in via the intermediate ceiling, both in the case of new buildings and renovations.

The advantages are obvious: No structural damage in the case of leakages, easy access to the technology and the possibility of carrying out repairs panel for panel without having to turn off the water supply for the entire shower area.

As regards the design, your ideas know hardly any bounds. The panels can be produced in room height or shorter, the choice of patterns is extensive, even surface contours can be varied upon request. And as far as the technical equipment is concerned, your wish is our command.
