

Geschwender Wall systems

Our wall systems are perfect in every sense...

...They can be mounted as facing walls onto existing walls or stand free in the room. All architectural ideas can be realised with our wall systems even ignoring existing structure.

In doing so, we attach particular importance to the composition of the materials. Unlike traditional wall constructions with brick or plaster board, our systems guarantee that they are 100% water-resistant. Moreover, the panel construction can be dismantled.

In the case of water leakage or if it becomes necessary to access technical equipment which is covered, the panels can be removed and re-installed without the use of tools and without causing any damage.

Besides helping with maintenance, this option has the additional effect that damaged surfaces or surfaces which are no longer modern can be swiftly replaced at low cost. You can be sure that the appearance of your building will be impeccable and modern at all times.

Mapet, Herrenberg

Who says that hidden systems must always be inconspicuous...

The Geschwender panel system is based on a self-supporting, aluminium frame construction which cannot be seen and onto which HPL Compact panels are fitted. A reduced, cubic style with distinctive, horizontal gaps forms the appearance. It is the expression of an almost timeless design which can stand on its own, but which also harmonises greatly with other stylistic elements which include more shapes.

Partition walls...

...you have the choice with our standard partition wall system. Be it separate changing areas for men and women with individual cubicles, joint locker areas with changing cabins, family changing cabins or other privacy screens. With the construction finished in aluminium

circular profiles, HPL compact boards and specific fittings for the cubicles, almost all common privacy screen elements can be realised. Through the HPL boards being fitted to the circular pipe without catch, the Geschwender partition walls also follow unconventional layouts.

Changing cubicles
Individual cubicles or changing cabins for families or disabled persons, in various shapes and sizes.

Toilet cubicles
Optionally with duct walls constructed out of panels which can be dismantled.

Shower partition walls
Can be also used in all areas which are directly exposed to splash water on account of their water-resistant construction.

Walkthrough changing cubicles
Classic changing cubicle with the function of separating wet and dry sides.

Privacy screens
On account of the surface of the HPL boards which is resistant to chemicals and easy to clean, they can also be used in areas in which a high degree of hygiene is required.
